

## MoSCoW Prioritisation for IMS Project

### Must Haves

- Must be able to create customers, items, and orders in the Database.
- Must be able to view customers, items, and order details in the Database.
- Must be able to update customers, items, and orders in the Database.
- Must be able to update orders by having the ability to add or remove items.
- Must be able to delete customers, items, and orders in the Database.

### Should Haves

- Should be able to easily set up the database using the schema when the user has logged in.
- Should have dummy data in place when the user has logged in.
- Should have a feedback to return when a user has finished putting an input.
- Should be able to catch errors when an error has occurred.
- Should be able to calculate the cost of an order

### Could Haves

- Could have the ability to see individual orders of customers.
- Could have a clear, detailed, and easy to navigate interface for the user.

### Would Haves

- Permission Control – Users would only be able to see and update their own orders.
